

GENERAL SPECIFICATION G2.31

Design Life

CONTENTS

G2.31 Design Life1

G2.31 DESIGN LIFE

- (a) "Design life" means the period of time for which an item or system is designed to operate to achieve the design output specified without major overhaul involving extensive dismantling, serious corrosion or necessity for substantial renewal of any anti corrosion system, reduction of efficiency in excess of 5%, or replacement of major components essential to the functioning of the item etc. except for consumables and for any limited-life components explicitly agreed at the time of the Contract award.

- (b) Minimum design lives shall be as follows:

(i)	Site Enabling works that are carried out to support the construction of the entire TWRP	15 years
(ii)	Civil and structural work	50 years
(iii)	Structural steelwork	40 years
(iv)	Pipelines including associated pipework and valves and other built-in pipework (other than plastic)	40 years
(v)	Plastic pipelines, structures of steel (including tanks), exposed pipework and valves outside pipelines	25 years
(vi)	Machinery including pumps, valve actuators, switchgear, cabling, air blowers, compressors, process plant and electrical installations	25 years
(vii)	Instrumentation, control, automation and telemetry equipment	10 years
(viii)	Computer systems	5 years
